

### AMENDMENTS IN THE DRAWINGS

Please amend figures 5, 6, 10a and 10b, 23, 24, 25c, 26c, 27a-27d, 28a-28d, 29a, 29b, and 30-36 to substitute "selected panel," "selected profile," and "selected profiling" for "precision panel," "precision profile" and "precision profiling," to reflect the changes to the description made in Response A, filed August 21, 2002, wherein the terms "precision panel" and "precision profile" were replaced with "selected panel" and "selected profile."

Amendments to the figure titles and captions are necessary to make the figures consistent with the descriptive text (see Office Action p. 2, third para.), which was amended previously to remove an obvious error in the application. The amended drawings are provided in clean copy format only, as per Pre-OG Notice of January 31, 2003 titled "Amendments in a Revised Format Now Permitted."

In addition, Applicants have taken this opportunity to correct minor typographical errors in other figures. For example, Figs. 11a-11b, 12a, 13a-13d, 14, 15, 16a-16b, 17, 18a-18e, 19a-19b, 21, 22, 23, 24, 25a-25c, 26a-26d, 27a-27d, 29a-29b, 30, 33, 34, 35, and 36 have been amended to change Arabic letters to Greek letters, where appropriate, in the abbreviations for genes in the panel (e.g. TNF-a to TNF- $\alpha$ ; IFN-g to IFN- $\gamma$ , etc), or in the abbreviation for microliter in the figure legends (e.g., ul to  $\mu$ L, etc.). Other figures have been amended to allow the gene labels to be read by turning one's head to the left, rather than to the right, to make all figures consistent in this regard (see Figs. 29a-29b and 30). In addition, some Figures have been changed because of clear error – i.e. wrong genes due to transpositions from the formal draftsman (INF-a to TNF- $\alpha$  in Figs. 11a-11b; INF-g to IFN- $\gamma$  in Figs. 18c-18e; TPN-b to TGF- $\beta$ 2 and TNF-g to IFN- $\gamma$  and Cdx-2 to Cox-2 in Fig. 22; IFN-9 to IFN- $\gamma$  in Figs. 29a-29b; and PAI-1 #2 to PAI-1 in Fig. 35); missing gene labels (IL-8 was added to the blank bar graph data in

Fig. 16a, and IL-8 and IL-15 were added to the blank bar graph data Fig. 16b); or wrong dosage amount (100mg/kg/day to 400 mg/kg/day in Fig. 31).

For clarity, because of the large number of figures involved, a complete set of Substitute Formal Drawings are submitted hereto with this response. Applicants respectfully request that the substitute formal drawings be made of record for this case.
